

# IHE LAB face to face meeting

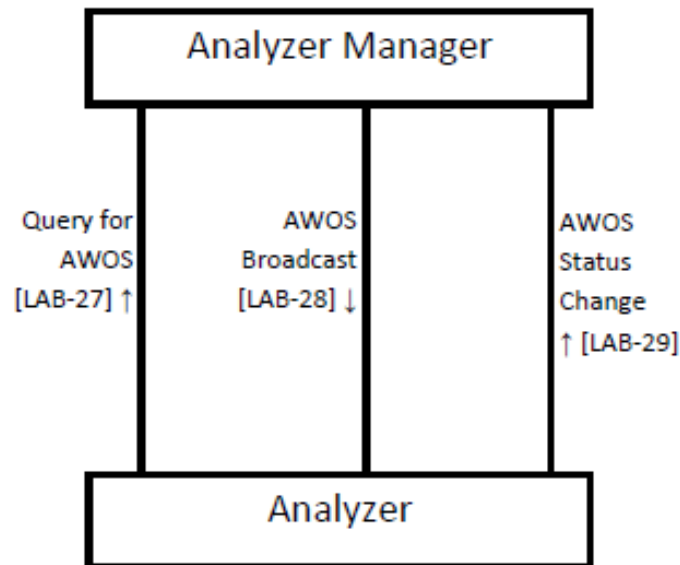

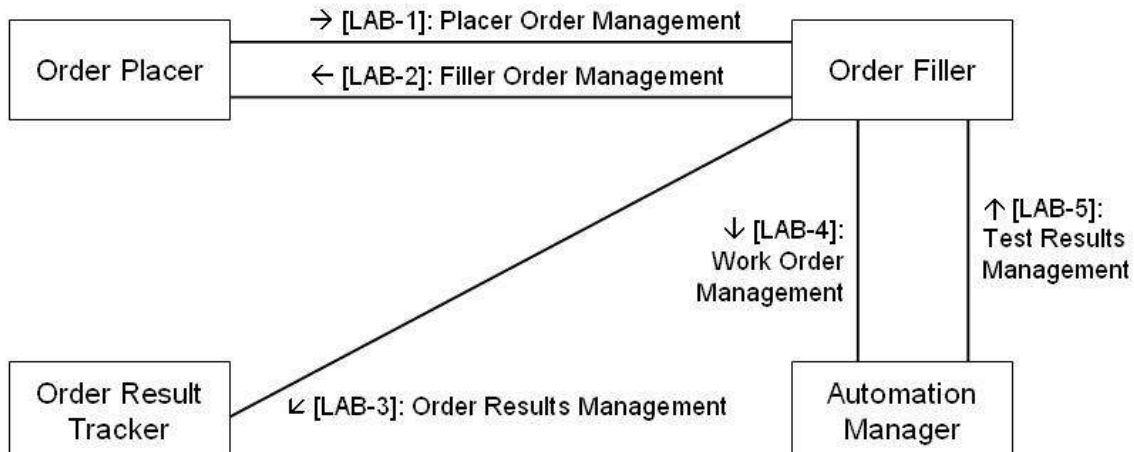

## Usage of reference terminologies SNOMED-CT, LOINC - UCUM

Filip Migom  
Product Manager GLIMS  
15 October 2013

History : IHE Chicago 4 Febr. 2013 by Filip Migom

# **IHE-LABORATORY : TERMINOLOGY**

# IHE-LTW + LDA/LAW + ILW ... LCSD

# IHE Laboratory.

Do we have to plan something with  
LOINC ? SNOMED ? ..

Belgium Netherlands Luxembourg

**BENELUX**

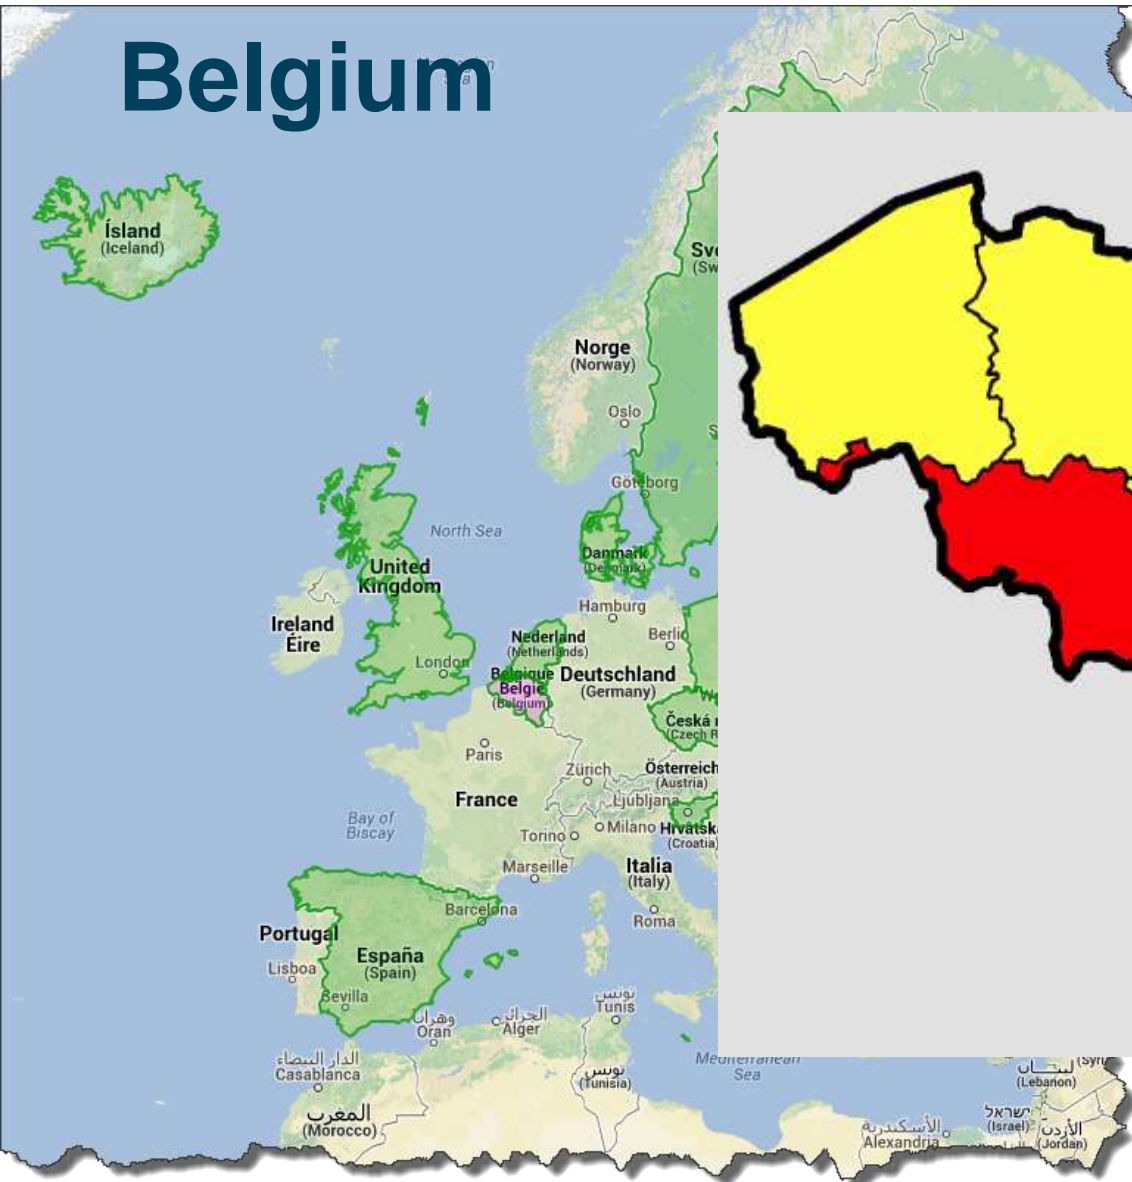

Usage of reference terminologies (SNOMED CT, LOINC, UCUM) for LAB in the Benelux

- Belgium
- Netherlands
- Luxemburg

# SNOMED-CT

# Belgium

# Point to Point Communication

Private /  
Hospital  
Lab

GP /  
Specialist

**Architecture:** Mediring, Medimail, Hector

[<> IHE-ITI]

**Structure:** H1, Medidoc, Medar (+ dialects)

[<> IHE-LAB-LTW]

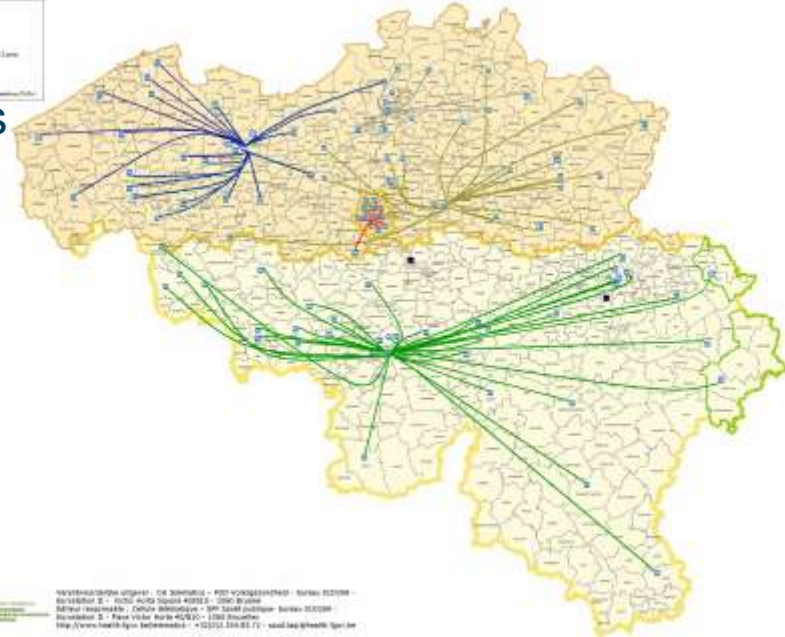

**Semantics:** Proprietary, ACTH, medidoc codes

[<> LOINC]

# Non targeted communication

- Currently many independent result viewers
- Integrate visualisation through HUBmetaHUB network
  - For GP & Specialists, visualisation integrated in EPR
  - Progressing well for hospital labs
  - eHealth roadmap for private lab's: connect to HUB's (direct or indirect)
- Cave: As such does not solve PDF & Old dino formats

# Structure & Semantics

o Not quite a happy love story

# Structure & Semantics

## ○ Coding systems

- LOINC (one code, one concept) vs SNOMED (pre/post coordination)
- The case for LOINC:
  - Covers most lab concepts
  - Most important axes covered (analyte, specimen, scale, kind of quantity (method))

16527-4	ACTIVE	Calcium/Sodium	MRto	Pt	Ser/Plas	Qn		Cal; Ca; Na+; Na; Mass concentration ratio; Mass ratio; MCRto
17861-6	ACTIVE	Calcium	MCnc	Pt	Ser/Plas	Qn		Cal; Ca; Mass concentration; Level; Point in time; Random; Ser
17862-4	ACTIVE	Calcium	MCnc	Pt	Urine	Qn		Cal; Ca; Mass concentration; Level; Point in time; Random; Ur;
17863-2	ACTIVE	Calcium ionized	MCnc	Pt	Ser/Plas	Qn		; Ca-I; Calcium free; iCa; Calcium active; Coagulation factor I; C
17864-0	ACTIVE	Calcium ionized	MCnc	Pt	Ser/Plas	Qn	ISF	; Ca-I; Calcium free; iCa; Calcium active; Coagulation factor I; C

## ○ Problems with LOINC:

- Too much (eg 68 times 'glucose', 734 starting with 'glucose', 72000 concepts)
- Too little sometimes (eg calculations, specialised hemato, some method specific things)
- Code + specimen + unit (Kind of Quantity)
- detailed unit: UCUM vs SNOMED (probably UCUM with mapping to SNOMED)

# Coding

The screenshot shows a web application interface for 'All analysis'. The header includes the logo of the Federal Public Service Health, Food Chain Safety and Environment and the user name 'User: Hans Tom Francke | Profile | Sign Out'. The left sidebar contains navigation menus for 'Dashboard', 'All analysis', and 'Reference data'. The main content area displays a table of analysis items with the following columns: Name, Specimen, Status, and Date. The table contains 17 rows of data, with the first row highlighted.

Name	Specimen	Status	Date
10-25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
1-25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
1-25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
1-25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No
25 Dihydroxycholesterol (Serum/Plasma)	Serum/Plasma	ENABLED	No

- Federal working group (± 10 people currently) : NL,FR,GE,EN
  - Sponsored by FOD: Progressing well (finally)
  - Link to LOINC, specimen (and method if applicable)
- Notes & remarks
  - Double validation of codes in progress by different pathologists + release
- Personal Remark :
  - missing Link within Europe (France, Germany, The Netherlands)
  - Like with France : SFIL

# Coding

## Labels

Label FR : Sodium (sérum/plasma) [mmol/L]

# Structure & semantics. Next ?

- Transactions under eHealth flag for order entry/reporting
  - Different options exist , but largely unused by lack of architecture & semantics -> to be clarified how & what by eHealth structure WG (soon).
  - Embed into existing eHealth WS framework
  - Make obligatory in GP soft certification criteria
  - Lab's must be ready when certification kicks in
    - LIS support (direct or indirect) for eHealth webservices and lab messages
    - Connect (direct or indirect) to HUBmetaHUB
  
- Semantics: choice of coding systems
  - >> LOINC (& national code) supersedes ACTH, medigest and medidoc, Snomed for germs / additional
  - Authentic source under eHealth umbrella
  - Currently ± top 300 concepts released + backward coding
  - Make obligatory in GP soft certification criteria
  - Lab's must be ready when certification kicks in
    - LIS mapping to LOINC and some SNOMED

# Belgium became a Member of IHTSDO

The screenshot shows a web browser window with the address bar displaying [www.ihtsdo.org/members/belgium/](http://www.ihtsdo.org/members/belgium/). The page header includes the IHTSDO logo and the text "INTERNATIONAL HEALTH TERMINOLOGY STANDARDS DEVELOPMENT ORGANISATION". A navigation menu contains links for "About IHTSDO", "SNOMED CT", "Licensing", "Members", "Development", "Events", "News", "Contact Us", "Links", and "Home".

The main content area features a list of member countries on the left, with "Belgium" highlighted in red. The central section is titled "Belgium" and contains the text: "In September 2013 Belgium became a Member of IHTSDO, joining a global effort to develop, maintain, and enable the use of SNOMED CT in health systems around the world." To the right of this text is the flag of Belgium.

Below the flag, the text reads: "Belgium", "Federal Public Service Health, Food Chain Safety and Environment, Place Victor Horta 40 box 10, 1060 Brussels, Belgium", and the website [www.health.belgium.be](http://www.health.belgium.be). Further down, it lists "Representatives as of September 2013" and "General Assembly:" with "Arabella D'Havé" listed under both categories. The "Member Forum:" section also lists "Arabella D'Havé".

# The Netherlands

Nationaal ICT Instituut in de Zorg

# “EENHEID VAN TAAAL”

The image shows a screenshot of a website and a Google Translate interface. The website has a navigation menu with the following items: Expertise, **Standaarden**, Samenwerking, Publicaties, Evenementen & training, and Nieuws. Below the menu, there are links for 'Overzicht standaarden', 'Eenheid van Taal', 'CIDD', 'SNOMED CT release center', and 'Terminologie Explorers'. The breadcrumb trail is 'Home > Standaarden > Eenheid van Taal'. The main content area has a sidebar with 'Eenheid van Taal', 'Datasets', and 'Valuesets'. The main text area is titled 'Eenheid van Taal' and contains the text: 'Eenheid van Taal houdt in dat de structuur en de betekenis van medische informatie eenduidig wordt gedefinieerd, zodat gegevens die worden vastgelegd of uitgewisseld slechts op een manier kunnen worden geïnterpreteerd.' Below the website screenshot is a Google Translate interface. The search bar contains 'eenheid van taal' and the result is 'unity of language'. The interface shows 'From: Dutch' and 'To: English' with a 'Translate' button. Below the search bar, there are tabs for 'French', 'English', 'Dutch', and 'Detect language'. The result 'unity of language' is displayed in a box with a close button (x).

# Terminology Explorers

The screenshot shows a web application interface for Terminology Explorers. At the top, there is a navigation bar with tabs for 'Expertise', 'Standaarden' (highlighted), 'Samenwerking', 'Publicaties', 'Evenementen & training', 'Nieuws', and 'O'. Below the navigation bar, there are links for 'Overzicht standaarden', 'Eenheid van Taal', 'CIDD', 'SNOMED CT release center', and 'Terminologie Explorers'. A breadcrumb trail reads 'Home > Standaarden > Terminologie Explorers'. On the left side, there is a sidebar menu with links to 'Terminologie Explorers', 'SNOMED CT', 'Diagnosethesaurus', 'ISO 9999', 'ICA-lijst', 'LOINC', 'ATC', 'ICD-10', and 'ICF'. The main content area features a heading 'Terminologie Explorer' followed by a paragraph: 'Dat het lastig is de juiste term of code te vinden in een terminologie- of codestelsel is begrijpelijk. Met eenvoudige `Terminologie Explorers` stellen wij u een tool ter beschikking waarmee u terminologie- of codestelsels kunt onderzoeken. In het linkermenu ziet u voor welke terminologie- en codestelsels explorers beschikbaar zijn.' Below this, another paragraph states: 'Het is ook mogelijk de explorers rechtstreeks te (laten) bevragen. Op [deze pagina](#) vindt u enkele voorbeelden hoe vanuit een EPD in de SNOMED CT Terminologie Explorer gezocht kan worden en welk resultaat dat oplevert.'

# SNOMED-CT on wikipedia

# SNOMED-CT vs. SNOMED-RT

## History

SNOMED was started in 1965 as a Systematized Nomenclature of Pathology (SNOP) and has further developed into a logic-based health care terminology.<sup>[6][7]</sup> SNOMED CT was created in 1999 by the merger, expansion and restructuring of two large-scale terminologies: SNOMED Reference Terminology (SNOMED RT), developed by the College of American Pathologists (CAP); and the Clinical Terms Version 3 (CTV3) (formerly known as the Read codes), developed by the National Health Service of the United Kingdom (NHS).<sup>[8][9]</sup> The final product was released in January 2002.

The historical strength of SNOMED was its coverage of medical specialties. SNOMED RT, with over 120,000 concepts, was designed to serve as a common reference terminology for the aggregation and retrieval of health care data recorded by multiple organizations and individuals. The strength of CTV3 was its terminologies for general practice. CTV3, with 200,000 interrelated concepts, was used for storing structured information about primary care encounters in individual, patient-based records.<sup>[10]</sup> Currently, SNOMED CT contains more than 311,000 active concepts and provides the core general terminology for the electronic health record (EHR).<sup>[11]</sup>

# SNOMED-CT

The screenshot shows a web browser window with the URL `decor.nictiz.nl/art-decor/snomed-ct`. The page title is "SNOMED CT". There are navigation tabs for "Decor", "Terminology", and "Testing". A search bar contains the term "macconk". The results section shows 4 results for "MacConkey agar". A detailed view for "MacConkey agar (substance)" is shown below, including its ID (409550005) and other mappings.

# SNOMED-CT : CONCEPT

SNOMED CT consists of four primary core components:

**Concept Codes** - numerical codes that identify clinical terms, primitive or defined, organized in hierarchies

**Descriptions** - textual descriptions of Concept Codes

**Relationships** - relationships between Concept Codes that have a related meaning

**Reference Sets** - used to group Concepts or Descriptions into sets, including reference sets and cross-maps to other classifications and standards.

# Precoordination and postcoordination

SNOMED CT provides a compositional syntax<sup>[18]</sup> that can be used to create expressions that represent clinical ideas which are not explicitly represented by SNOMED CT concepts.

For example, there is no explicit concept for a "third degree burn of left index finger caused by hot water". However, using the compositional syntax it can be represented as

```
284196006 | burn of skin | :
  116676008 | associated morphology | = 80247002 | third degree burn injury |
, 272741003 | laterality | = 7771000 | left |
, 246075003 | causative agent | = 47448006 | hot water |
, 363698007 | finding site | = 83738005 | index finger structure
```

Such expressions are said to have been 'postcoordinated'. Post-coordination avoids the need to create large numbers of defined Concepts within SNOMED CT. However, many systems only allow for precoordinated representations. Reliable analysis and comparison of post-coordinated expressions is possible using appropriate algorithms machinery to efficiently process the expression taking account of the underlying description logic.

For example, the postcoordinated expression above can be transformed using a set of standard rules to the following "normal form expression" which enables comparison with similar concepts.

```
64572001 | disease | :
  246075003 | causative agent | = 47448006 | hot water |
, 363698007 | finding site | = ( 83738005 | index finger structure | :
  272741003 | laterality | = 7771000 | left | )
, { 116676008 | associated morphology | = 80247002 | third degree burn injury |
, 363698007 | finding site | = 39937001 | skin structure | }
```

# Terminology vs. Classification

SNOMED CT is a clinical terminology designed to capture and represent patient data for clinical purposes.<sup>[27]</sup> International Classification of Diseases (ICD) is a statistical classification system used to assign diagnostic and procedural codes in order to produce coded data for statistical analysis, epidemiology, reimbursement and resource allocation.<sup>[28]</sup> Both systems use standardized definitions and form a common medical language used within the electronic health record (EHR) systems.<sup>[29]</sup> SNOMED CT enables information input into EHR during the course of patient care, while ICD facilitates information retrieval, or output, for secondary data purposes.<sup>[29][30]</sup>

	SNOMED CT	ICD
<b>Type</b>	Terminology System	Classification System
<b>Purpose</b>	Information Input	Information Output
<b>Function</b>	Describes and defines clinical information for primary data purposes	Aggregates and categorizes clinical information for secondary data purposes

# USE-Cases

More specifically, the following sample computer applications use SNOMED CT:

- Electronic Health Record Systems
- Computerized Provider Order Entry CPOE such as E-Prescribing or Laboratory Order Entry
- Catalogues of clinical services; e.g., for Diagnostic Imaging procedures
- Knowledge databases used in clinical decision support systems (CDSS)
- Remote Intensive Care Unit Monitoring
- Laboratory Reporting
- Emergency Room Charting
- Cancer Reporting
- Genetic Databases

# License !

- SNOMED CT is maintained and distributed by the [IHTSDO](#), an international non-profit standards development organization, located in Copenhagen, Denmark.
- The use of SNOMED CT in production systems requires a [license](#).
  - On the one hand SNOMED CT can be achieved by national membership in the IHTSDO (charged according to the [GNP](#)).
  - On the other hand it can be used via a corporate business license (dependent on the number of end users). LDCs (least developed countries) can use SNOMED CT without charges.
- For scientific research in medical informatics, for demonstrations or evaluation purposes SNOMED CT sources can be freely downloaded and used.
- The original SNOMED CT sources in tabular form are accessible by registered users of the [Unified Medical Language System](#) (UMLS) who have signed an agreement. Numerous online and offline [browsers](#) are available .
- Those wishing to obtain a license for its use and to download SNOMED CT should contact their National Release Centre, links to which are provided on the [IHTSDO](#) web site .

# Microbiology Qualifier Values

From:  ihe-laboratory-committee@googlegroups.com on behalf of  Riki Merrick <rmerrick@iconnectconsulting.com>  
 To:  ihe-laboratory-committee@googlegroups.com  
 Cc:  
 Subject: Re: [ihe-laboratory-committee:1077] IHE-LAB3 : Microbiology : How to transmit AST results ?

Laurent,

I like the fact that you use CE for the interpretation OBXes - yes there are SNOMED codes for the common ones:

131196009^Susceptible (qualifier value)^SCT

30714006^Resistant (qualifier value)^SCT

11896004^Intermediate (qualifier value)^SCT

we don't have a code for:

nonsusceptible

Susceptible-dose dependent

Insufficient evidence

Synergy - susceptible

Synergy - resistant
