| Problem | Requires moderate to maximum assistance in moving. Complete lifting without sliding against sheets is impossible. Frequently slides down in bed or chair, requiring frequent repositioning with maximum assistance. Spasticity, contractures or agitation leads to almost constant friction. | Friction and shear problem | | | | | Does not move in bed (finding) | 301684000 | Present (qualifier value) | 52101004 | Problem (finding) | 55607006 |
| Potential problem | Moves freely or requires minimum assistance. During a move skin probably slides to some extent against sheets, chair, restraint or other devices. Maintains relatively good position in chair or bed most of the time but occasionally slides down. | Friction and shear potential problem | | | | | Difficulty moving up and down bed (finding) | 301697003 | Potentially abnormal (qualifier value) | 394845008 | Problem (finding) | 55607006 |
| No apparent problem | Moves in bed and in chair independently and has sufficient muscle strength to lift up completely during move. Maintains good position in bed or chair. | Friction and shear no apparent problem | | | | | Able to move up and down bed (finding) | 301693004 | Absent (qualifier value) | 2667000 | Problem (finding) | 55607006 |
