

38214-3 Pain severity: Find: Pt: ^Patient: Qn: Reported.visual analog score

NAME

Component	Property	Time	System	Scale	Method
Pain severity	Find	Pt	^Patient	Qn	Reported.visual analog score

BASIC PROPERTIES

Class/Type: H&P.HX/Clinical
 Units Required: N

LANGUAGE VARIANTS

Simplified Chinese	Bethune International Peace Hospital				
疼痛 严重性	发现(结果)	时间点	^病人	定量型	报告的.目视 模拟 评分
Spanish	Conceptum Medical Terminology Center				
PAIN SEVERITY	hallazgo	punto en el tiempo	^PATIENT	cuantitativo	informe.escala visual análoga

PARTS/SYNONYMS

Part No.	Part Type	Part Value	Part Name	Synonym	Type
LP6813	PROPERTY	Find	Finding	Finding	
	DESCRIPTION: Finding is an atomic clinical observation, not a summary statement as an impression. Physical, historical, review of systems and other such observations have a property of Finding. These may have a scale of NOM for coded findings or NAR for findings reported in narrative text.				
LP6960	TIME	Pt	Point in time (Random)	Point in time Random	
	DESCRIPTION: to identify measures at a point in time. This is a synonym for "spot" or "random" as applied to urine measurements				
LP6985	SUPER SYSTEM	Patient			
LP7753	SCALE	Qn		QNT Quan Quant Quantitative	ABBREV ABBREV
	DESCRIPTION: The result of the test is a numeric value that relates to a continuous numeric scale. Reported either as an integer, a ratio, a real number, or a range. The test result value may optionally contain a relational operator from the set {<=, <, >, >=}. Valid values for a quantitative test are of the form "7", "-7", "7.4", "-7.4", "7.8912", "0.125", "<10", "<10.15", ">12000", "1-10", "1:256"				
LP34342	METHOD	Reported.visual analog score	Reported.Visual Analog Score	VAS	ACRONYM
LP7800	CLASS	H&P.HX	History catagories
